Monitor Dynamics Receives System Upgrade Contracts for Award-Winning SAFEnet® Unified Security Platform

Scheduled Upgrades to Latest SAFEnet® PACS to Deliver FIPS 201 Identity Compliance

SAN ANTONIO, TEXAS – Monitor Dynamics, the leader in Unified Access Control, Intrusion Detection and Identity Compliance for Government, announced that it has received contracts to upgrade the security systems for 10 of its long-standing enterprise customers. Scheduled customers include several sensitive classified Government facilities, Department of Defense Branches, Federal Civilian Agencies, Homeland Security facilities and large enterprise commercial customers.

When completed, these MonDyn customers will be able to utilize the complete feature set within SAFEnet Version 6.2.16 and SAFEnet IDC hardware. Each potential customer project will involve a legacy upgrade to the latest SAFEnet version, with all Unified Security Platform capabilities. Many facilities are expected to follow this initiative with a hardware modernization program involving MonDyn's Intelligent Digital Controller (IDC) IP-enabled hardware. The ALERT (Advanced Logic Engineering & Research Team) Team has put technical measures in place to ensure that MonDyn legacy customers can seamlessly migrate to the latest version of SAFEnet.
