Milestone Surveillance on the SAFEnet Unified Security Platform

SAFEnet is a patented open architecture command and control security operating platform that is a generation beyond current integrated solutions. It overcomes the limitations of current industry offerings by providing:

- Unprecedented Flexibility to Customize and Scale the Solution
- True Unification of Attached Resources
- A Single Environment, A Complete Solution
- The Fastest, Most Cost Efficient Development of New Capabilities
- Capacity to Meet Security Needs Well into the Future
- True Unification of Attached Resources

The benefits of Unification over Integration are many. True Unification of Video Surveillance into the Access Control and Intrusion Detection Platform allows complete collaborative and actionable views of the entire security picture for the fastest situational analysis and response. Unified Access, Intrusion and Video delivers automated event response and management by exception (as critical events occur). The SAFEnet / Milestone unified solution adds immediate value and Return on Security Investment by requiring less resources, training time and operating hardware than competing stand-alone video surveillance or non-unified access control products.

With the real-time live video "pop-up screen" feature, which is triggered by pre-programmed (high, medium and low risk) alarm events and shown on the monitor screen display, SAFEnet and Milestone together provide live visualization, decision support and enterprise-wide command, contain and control functionality to any security operations center.

The real-time video "pop-up" window is activated based on the configuration of video through an action item, which has been linked to specific alarm points or alarm conditions within the SAFEnet system. The linked video will typically be delivered from an assigned camera in the same area as the alarm (and condition) that was detected and reported through the system. Milestone's live video within the SAFEnet platform can be configured to display automatically on the reporting of the alarm, by manual command, or when the system operator clicks on the alarm in the queue for acknowledgement.
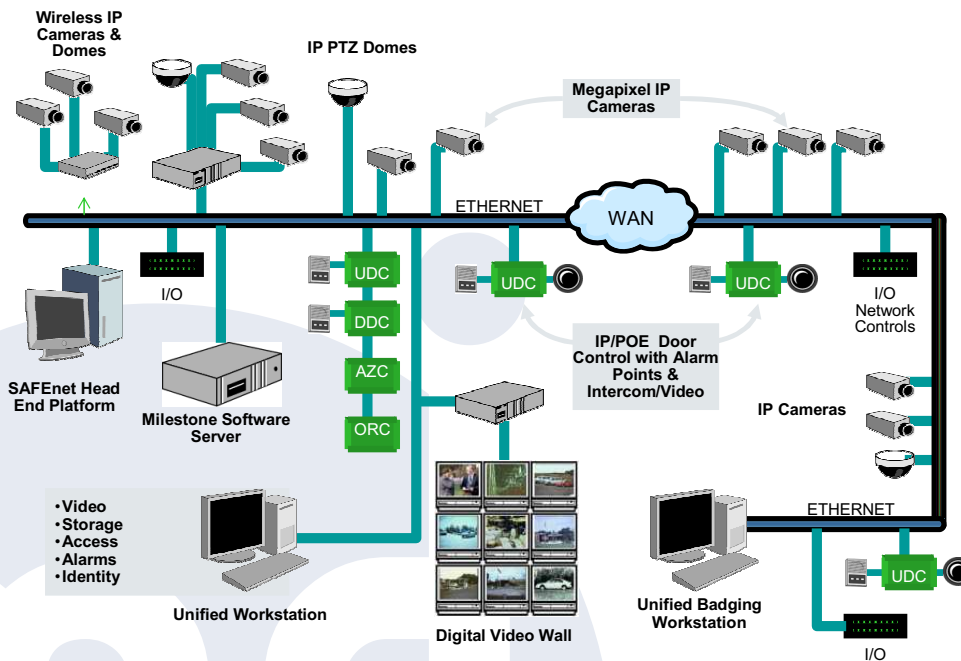

Unified Video: System Features
- **Customizable Video "Pop-up" on Event**
- **Geographical Video Feeds from Map Icons**
- **Media Viewer Feature for Multiple Camera Call Ups at Once**
- **Switchable Media Camera View on Event (Customizable)**
- **Unified Playback Function for Immediate Call Up of Recorded Video**

Milestone Surveillance on the SAFEnet Unified Security Platform

Playback of stored Milestone video clips can be requested directly from the SAFEnet administration screen. The SAFEnet Media Viewer function displays live video feeds from IP video cameras connected to the Milestone NVR software. The SAFEnet system operator can request and display live video from any IP camera at any time. To make camera selection location as easy as possible, the Graphical Maps detailing architectural floorplans within SAFEnet can be assigned with camera icons, which provide immediate display of real-time live video from any selected camera simply by clicking the map icon.

About Milestone Systems
Founded in 1998, Milestone Systems is the global industry leader in open platform IP video management software. The Milestone XProtect platform delivers powerful surveillance that is easy to manage, reliable and proven in thousands of customer installations around the world. With support for the widest choice in network hardware and integration with other systems, XProtect provides best-in-class solutions to video enable organizations – managing risks, protecting people and assets, optimizing processes and reducing costs.
