

Monitor Dynamics Lands Unified Security Platform Deal with Major DoD Customer

SAFEnet Unified PACS Platform to Include HSPD-12 and FIPS-201 Compliance for Federal Identification Standards

SAN ANTONIO, Texas – Monitor Dynamics, the leader in Unified Access Control, Intrusion Detection and Government Identity Compliance announced today that it was awarded a security contract and multiple SAFEnet system orders from a major Department of Defense (DoD) Army base facility in the United States. The contract includes security products, technical support, training and expert Engineering services to support the Prime Contractor (MonDyn Certified Dealer).

With over fifty-thousand soldiers, twelve-thousand civilian employees and a combination of twenty-three battalions, brigades, companies, commands and divisions on base, this MonDyn customer is one of the largest and most diverse military posts in the world. The facility trains, sustains, mobilizes, and deploys troops to conduct global, full spectrum operations in support of U.S. military strategy. In its arsenal, the post has an array of modernized warfighting equipment including 2,500 tracked vehicles, 10,000 wheeled vehicles and 200 fixed and rotary-winged aircraft. Its state-of-the-art digitized warfare training facility is a destination for US military troops requiring hands on instruction before real-time operation of modern weapons in the field.

The contract consists of two project phases. In the first project, MonDyn will modernize the Integrated Commercial Intrusion Detection System II (ICIDS II) physical security system. In the second project, MonDyn will work with the Prime Contractor, who has been certified on the SAFEnet Unified Security System, to upgrade servers, upgrade workstations, configure multiple databases and transition the information systems securely. After the transition, a Performance Verification Test (PVT) will be completed by MonDyn Field Engineers to ensure that all devices function properly and report back to the head-end software platform.

MonDyn's comprehensive solution will deliver complete video integration capabilities to the client's security managers and empower compliance with Homeland Security Presidential Directive 12 (HSPD-12) and Federal Information Processing Standards Publication 201 (FIPS-201) mandates. Compliance with these national directives makes certain that the facility has a common identification standard for Federal employees and contractors.

MonDyn solutions convey value to the customer by delivering secure and reliable identification capabilities, integrated into their Physical Access Control Systems (PACS) which:

- Are issued based on sound criteria for verifying an individual employee's identity
- Are strongly resistant to identity fraud, tampering, counterfeiting, and terrorist exploitation
- May be rapidly authenticated electronically; and
- Are issued only by providers whose reliability has been established by an official accreditation process.

MonDyn has proven to be the industry leader in providing unified security solutions that include HSPD-12 and FIPS-201 PACS compliance to the United States Government and the Department of Defense. By providing a complete base-wide solution to DoD clients that includes software, hardware, training, and direct on-site Engineering support, MonDyn is positioned to maintain its leadership position in the Homeland Security space by understanding the customer's needs and delivering complete solutions that bring operational efficiencies and enhanced security management features.

MonDyn is currently working on contracts with numerous other Government agencies to provide them with similar types of FIPS 201 Compliant PACS solutions. The US Government is the largest user of unified security solutions in the world and MonDyn remains at the forefront of the High-Security Government and Homeland Security market.
